This section provides information you use to determine if this is the manual you need. This section also lists related documents and explains the conventions used in this manual.

1.1 Who Should Read This Manual

This manual is intended for ValveLink software managers who are:

• Responsible for installing ValveLink software on a Personal Computer (PC)

• Responsible for establishing user accounts and privileges

Or for process control engineers, instrument technicians, or maintenance personnel who are:

• Responsible for using ValveLink software to configure, calibrate, or diagnose FIELDVUE Instruments

To use this manual, you must understand general process control principles and your instruments. If you are installing ValveLink software, you must know how to log on to your PC and issue commands. If you are using ValveLink software to calibrate, configure, or diagnose an instrument, you should be familiar with process instruments and their operating parameters.

1.2 Is This the Right Manual?

This manual contains the information needed to install and use the VL2000 Series ValveLink software. ValveLink software is a Windows-based software package which allows easy access to the information available from FIELDVUE instruments. Version 4.0 of the software is compatible with both HART (with firmware revisions 3 through 6) and Foundation fieldbus instruments. Table [1] lists the ValveLink software types this manual applies to and the functions available for each.

This manual describes how to install and use VL2000 Series ValveLink software, which requires the hardware and software listed in the following subsections. For a description of related documentation, refer to subsection [1,7]
